Unprecedented increases of information growth along with more stringent corporate governance and information classification requirements are driving up costs of information management and discovery processes. Organizations facing these problems are bringing certain phases of ediscovery in house to gain more control and seeking ways to improve efficiencies and simplify processes.

Globanet and Clearwell

Globanet provides ediscovery solutions to enterprise and government customers that help improve processes, reduce costs and risks, and ensure the defensibility of internal ediscovery practices. Globanet offers customers a range of ediscovery services including litigation readiness assessments, product implementation, case setup, and customized workflow development, using the Clearwell E-Discovery Platform from Veritas. This industry-leading platform enables customers to streamline the ediscovery process by efficiently organizing and analyzing large volumes of electronically stored information (ESI). Built to support the iterative workflows of ediscovery, Clearwell makes it easy for attorneys, litigation support professionals, and security teams to defensibly solve real-world challenges throughout the entire ediscovery lifecycle – from identification and collection through review and production.

Globanet eDiscovery Services

- Proof-of-concept services that ingest and analyze data to determine and quantify the immediate benefits of a Clearwell deployment.
- Implementation services to install and configure the necessary sources to enable data to be gathered and indexed.
- Workflow configuration services that define user roles and workflows, and configure permissions and settings to support litigation, investigation and compliance review processes.
Improve Your eDiscovery Results

Clearwell reduces the cost, time and complexity of ediscovery by providing a single, fully integrated processing, analysis, review and production platform. Whether managed internally or by Globanet, the Clearwell E-Discovery Platform:

1. Accelerates document processing, allowing users to gain immediate visibility into case facts and estimate case budget
2. Brings a new level of transparency to ediscovery search, enabling a more collaborative and defensible process
3. Delivers interactive analysis and culling capabilities to prune large datasets to smaller, more relevant ones
4. Offers an integrated and flexible ediscovery workflow, from processing to review and production, eliminating the costly movement of data across multiple, disparate tools
5. Provides comprehensive case management, auditing, and reporting capabilities, enabling users to monitor case progress in real-time

Gartner, Inc. recognized Clearwell as a leading ediscovery software provider in the 2012 Magic Quadrant for E-Discovery Software. They cited “outstanding customer satisfaction” and ease of evaluation and implementation as key strengths. Hundreds of organizations are using the Clearwell E-Discovery Platform, including Charles Schwab, First American, GlaxoSmithKline, Nassau County, New York State Attorney General, Royal Bank of Canada, Toyota and the U.S. Department of Agriculture.

Clearwell E-Discovery Platform Features

The Clearwell E-Discovery Platform is an appliance that is up and running in less than 25 minutes. Since the product’s web-based interface is extremely intuitive and user-friendly, most attorneys, litigation support professionals, and forensics teams are productive immediately with minimal training. The solution seamlessly integrates with existing collection processes and allows users to consolidate all processing, analysis, review and production tools into one platform.

Processing

Advanced Pre-Processing Filters enable users to interactively filter data by custodian, date, strong file type, and file size prior to processing. Clearwell also provides one-click filtering of custom file and “NIST list” items. This filtering significantly reduces downstream processing and review costs.

Pre-Processing Analytics

- Rapid Processing
- Intelligent De-Duplication
- Multi-Language Support

Search

- Transparent search with
- Advanced Search each preview, search filters
- Auto-Filters and search report
- Hit-Highlighting
- Multi-Keyword Search
Analysis

- Discussion Threads
- Topic Clustering
- People Analytics
- Term Analytics
